

October 2024 Release v3.4.0

We're excited to announce the launch of INVISION v3.4.0! This release introduces Elevation Maps and enhances usability and efficiency across multiple features.

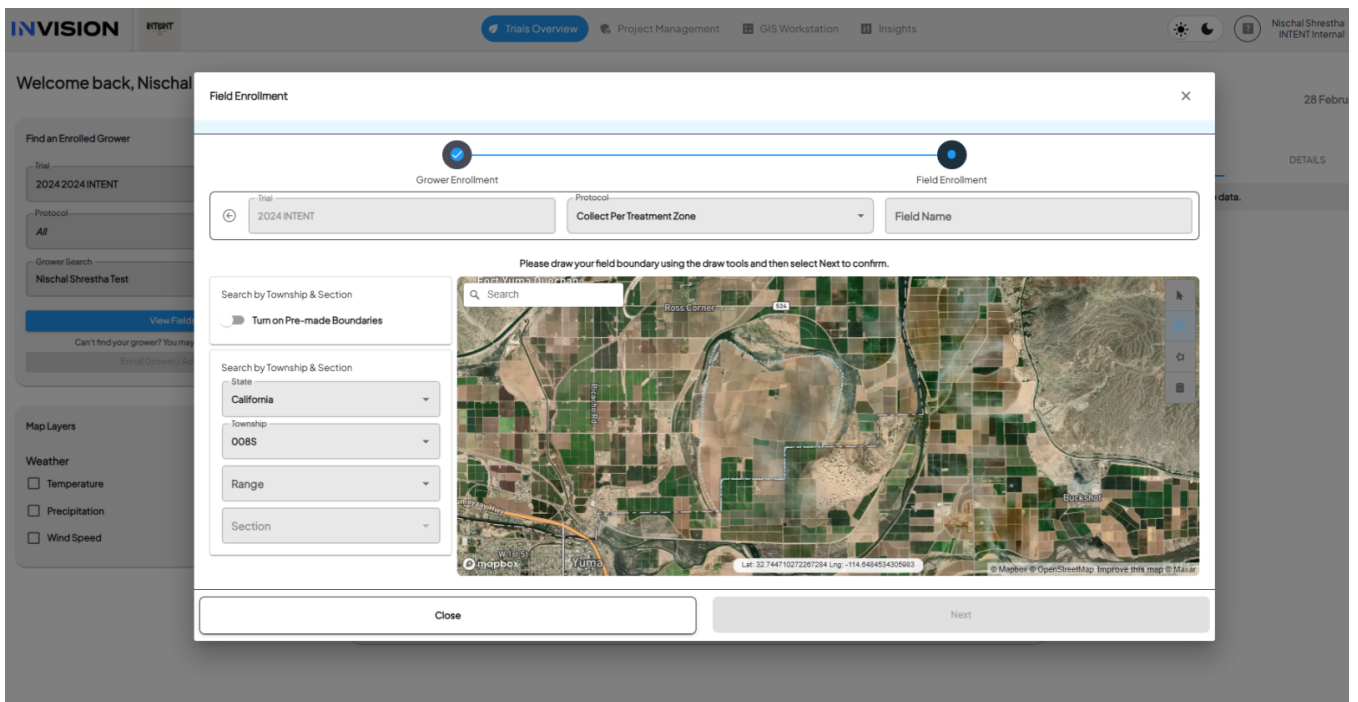

New Features & Improvements

- **Elevation Maps in View Fields**

- INVISION now automatically generates **elevation layers** based on planting and as-applied data files, providing enhanced field-level insights.

- **Enrollment Upgrades**

- **Township, Section & Range Enrollment:** Users can now enroll fields using **Township, Section, and Range** in the U.S., with support for Canada coming soon.
- **Create Field Workflow:** The enrollment process is now more intuitive with a new **card-based design** (upload file vs use map), simplifying the workflow.

• GIS Workstation Enhancements

- **Yield Maps Preview:** Users can preview both **Productivity and Treated Yield Maps** directly in the GIS Workstation while processing a harvest file.
- **Standardized Machine Data Sandbox (Staging Only):** A sandbox environment for data conversion is now available in staging, allowing machine data standardization testing for future integrations.

- **New Trial-Processor Role:** Introduced a new “**trial-processor**” role, granting access to GIS Workstation while limiting field access to relevant user roles. **Trial-Operatives** can now access the GIS Workstation with this role.
 - **Covercress Growing Degree Days (GDD)**
 - Covercress GDD calculations are now available in INVISION.
-

Bug Fixes

- **Favorited Imagery in PDF Results:** The first four favorited imagery items (sorted by ascending date) are now included in PDF results.
 - **GDD Discrepancy Fix:** Resolved inconsistencies between **Season at a Glance (Weather)** and **Imagery Timeline** charts.
 - **Soil Summary Chart Hover Issue:** Fixed an issue where identical yield numbers appeared on hover in the Soil Summary Chart within View Fields.
-

Revision #1
